

RFID Transponder Coils – 5315TC

The 5315TC is Coilcraft's most rugged and lowest cost antenna coil designed for RFID applications at 125 kHz. The wrap-around terminals have large mounting surfaces to ensure excellent board adhesion. The coil is wound on a plastic base, providing great durability and allowing this part to withstand harsh mechanical shock.

Their robust construction and 125°C rating make these parts suitable for use in the most severe environments. They were developed for automotive applications, including tire pressure monitoring systems.

In addition to the standard models shown, Coilcraft can design transponder coils to operate at other frequencies.

Coilcraft **Designer's Kit C369** contains four samples each of the standard parts shown. To order, contact Coilcraft or visit <http://order.coilcraft.com>.

1. When ordering, please specify **packaging** code:

5315TC-725XGLD

Packaging: D = 13" machine-ready reel. EIA-481 embossed plastic tape (3000 parts per full reel).

B = Less than full reel. In an effort to simplify our part numbering system, Coilcraft is eliminating the need for multiple packaging codes. When ordering, simply change the last letter of your part number from B to D.

2. Inductance and Q measured using Agilent/HP 4192A impedance analyzer at 125 kHz. For recommended test procedures, contact Coilcraft.
3. Read distance measured using the KEELOQ® Transponder Evaluation Kit part number DM303005 from Microchip. Distance was recorded as

the voltage across the resonant circuit dropped below 10 mV.

4. Sensitivity measured in accordance with Coilcraft application note "Measuring Sensitivity of Transponder Coils."
5. Matching capacitor value required for parallel resonant circuit operating at 125 kHz.
6. DCR measured on micro-ohmmeter.
7. SRF measured using Agilent/HP 8753D network analyzer.
8. Electrical specifications at 25°C.

Refer to Doc 362 "Soldering Surface Mount Components" before soldering.
